Lasers in Endodontics Giovanni Olivi, Roeland De Moor, Enrico DiVito, 2016-03-15 This book offers up-to-date information on all aspects of the use of lasers in endodontics, focusing especially on the various laser applications, including primary and permanent root canal therapies, retreatments, apical surgery and pulp therapy. Every laser technique used in endodontics is carefully described and illustrated, with detailed coverage of both conventional methods and more recent developments such as laser-activated irrigation and photon-induced photoacoustic streaming. In addition, a separate section addresses the basic science of laser dentistry, explaining the physics, describing laser-tissue interactions, and discussing different types of laser. Extensive reference is made to the international literature in order to provide the reader with a clear, evidence-based understanding of the merits of various approaches. In offering a balanced mix of descriptions of clinical applications, clinical data, scientific research and logical criticism, the book will serve as an excellent reference for a wide audience comprising general dentists as well as specialists.

Principles of Medical and Dental Lasers Rene Franzen, 2011-10-11 This book is especially written for physicians and dentists who are new to the exciting field of lasers. It will give you a good reference for the physical and biophysical part of laser medicine and dentistry. It may also serve you well as a reference and study material in a fellowship or master's program. There are many books about lasers and laser physics, but these are written by physicists for physicists - and they generally do not address the specific knowledge a doctor needs to be aware of when it comes to laser-tissue-interaction. In this book, I want to cut to the chase. I will give you the background information you need when new to the field of laser medicine or laser dentistry: Your laser: what is that thing you just bought or are considering to use? How does absorption, scattering and transmission in biological tissues take place? On what parameters do the clinical effects depend? How can a laser be used as a minimally invasive tool in modern medicine?
